LASER HAIR REMOVAL

Here at Skin and Body we use clinically proven, safe and effective long-term removal of unwanted hair. between 6-10 sessions, spaced 4 weeks apart is recommended to permanently reduce/remove body hair. Our lasers can treat all hair and skin types!

DITCH THE RAZOR, SAY YES TO LASER!

A close-up photograph of a person's arm, showing a faded tattoo. The tattoo appears to be a dark, possibly black or dark blue, design that is now significantly lighter and less distinct. The skin is fair and the lighting is soft, highlighting the texture of the skin and the fading of the ink.

TATTOO REMOVAL

Laser tattoo removal works by firing laser light into the tattoo which breaks the ink into tiny pieces, these little pieces are easy for the body to absorb. This allows the ink to be removed from the body itself.

Laser tattoo removal avoids damaging the skin while removing the tattoo, unlike other tattoo removal methods.

PRP

EVER WONDERED HOW PRP TREATMENTS WORK?

PRP is created using your own blood! We take your blood and put it into our centrifuge machine, this spins the blood at high speed and separates the red blood cells and the plasma.

Plasma contains proteins that support cell growth and collagen stimulation. Collagen is the main structural protein found in skin, it gives our skin strength and elasticity, reducing fine lines and wrinkles and giving it a more youthful appearance.

PRP can be used in many places such as the scalp to stimulate hair growth and we also offer the vampire facial, which became hugely popular after social media star Kim Kardashian posted a selfie after having the treatment herself

HIFU

This procedure is your next best thing to an actual face lift. Though not possible to get the exact same benefits from a surgical face lift, this treatment gets as close as possible without a knife in sight.

**6 MONTHS
POST
PROCEDURE**

MEDICAL GRADE SKIN CARE

Chemical peels improve skin texture and firmness, decreasing fine lines and wrinkles. Peels also even out skin tone, improve acne-prone skin and reduce pore size appearance.

Alumier^{MD}

Real Patients Real Results

ROSACEA

At Skin & Body we can offer Medical Grade skin care brand AlumierMD, we offer professional treatments and home care products.

Beautiful skin doesn't happen overnight. A single chemical peel can provide the immediate effect of bright and radiant skin. However, more significant results in treating textural issues, fine lines and inflamed acne take time.

ANTI WRINKLE INJECTIONS

BEFORE

AFTER

As we get older, our faces show the effects of time. Whether it is from simply laughing and frowning, or smoking and sun damage, our faces are prone to fine lines and wrinkles. Anti-wrinkle treatments aim to smooth out these facial wrinkles, helping to turn back the clock a few years.

They are a popular choice for those who want to reduce the appearance of fine lines and wrinkles. The benefits some of our patients have said they experience are:

- a reduction of the visible effects of ageing
- feeling as though you look younger, or closer to your actual age
- an overall improved appearance
- greater self-esteem and self-confidence

CRYSTAL FAT FREEZE

Cryo Lipo known as Fat Freeze is a non-invasive treatment used to reduce unwanted fat by using near sub zero temperatures to kill the fat cells without damaging the surrounding tissues and nerves.

When fat cells are subjected to being cooled below body temperature the freezing causes the fat cells to die followed by a local inflammatory response. When fat cells are exposed to extreme cold conditions, the body's usual response is to restrict circulation to keep the core of the body at the correct temperature. Cryo Lipo makes use of a powerful vacuum which adds to the inflammatory response by drawing blood up to the surface layers of the skin killing the cells.
